

THIRDS AND FOURTHS

Ellery took $\frac{3}{4}$ of a sandwich, but could eat only $\frac{2}{3}$ of what he took.

Edwina took $\frac{2}{3}$ of a sandwich the same size as Ellery's, but could eat only $\frac{3}{4}$ of what she took.

Which of them ate more?

Explain why the answer works out as it does. Be sure to include a diagram or picture.
